Exporting PDFs using Quark 7 or 8

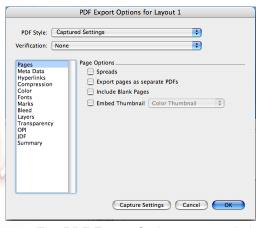

After all design has been finalized, begin by choosing File/Export/Layout as PDF.

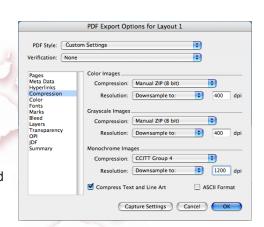

Enter the name of your document and choose the location you wish it to go. Additionally, be sure to choose the pages you wish to generate a PDF for, the example has "All" pages chosen.

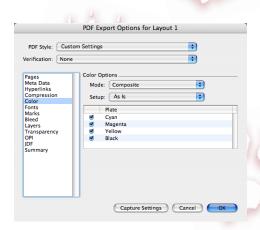

Click on the "Options..." button.

The PDF Export Options are reveled.

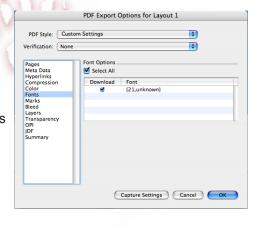

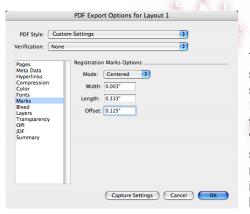

Click on "Compression" and enter the settings as shown.

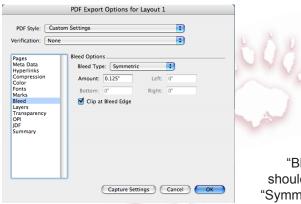

Click on "Color" and enter the settings as shown. This will leave all colors from the original file as is.

Verify the "Select All" has been checked. This ensures that all fonts used in the document are downloaded to the PDF.

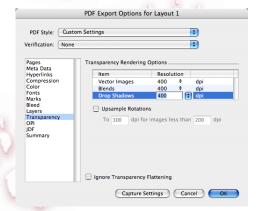

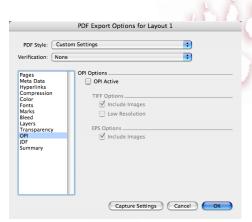

The "Marks" should be set to the settings as shown. It is important to note that the "Offset" should be set to .125" so the marks do not interfere with the bleed requirements.

"Bleed Type" should be set to "Symmetric .125"

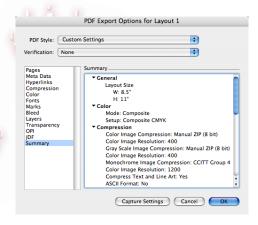

"Transparency" settings as shown in the above example.

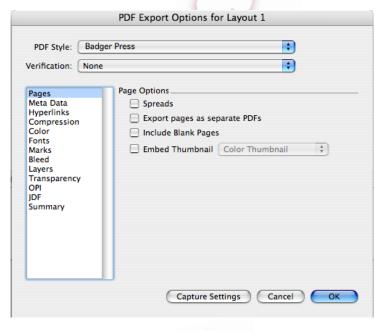

Be sure that "OPI" is unchecked.

The "Summary" tab allows you to review the settings that you have requested.

PDF Style: Ne	PDF Export Options for Layout 1 w PDF Output Style
Verification: Nor	
Pages Meta Data Hyperlinks Compression Color Fonts Marks Bleed Layers Transparency OPI JDF Summary	Page Options Spreads Export pages as separate PDFs Include Blank Pages Embed Thumbnail Color Thumbnail
	New PDF Output Style Name: Badger Press
	Cancel OK OK

From the "PDF Style" pulldown choose "New PDF Output Style..." and enter Badger Press in the "Name" field. If you had chosen the "Composite CMYK" option in the "Color" tab it would be appropriate to enter "Badger Press CYMK" in this field.

In the future when exporting a PDF from InDesign you will be able to choose the PDF Style: Badger Press, which would automatically use the settings that were saved.
